TREAT was designed by clinicians for clinicians to be a friendly and easy to learn application. Every step of the way, TREAT facilitates easy data entry including the ability to carry forward data from previous assessments, easy to read and navigate forms, spell-checking, and edit checks. Predefined and customizable roles with granular, configurable privileges to meet the needs of clinical workflow. All user activity is audited with user ID & timestamp: logons, logoffs, updates, insertions, deletions, views, and searches. All data interfaced to TREAT is secured before transmission. ASP model: A secure version of TREAT that is accessible via the Internet and is ideal for small organizations or individual clinicians. The hardware and software resources, network security, data security and integrity, and system maintenance are all managed by HInext. Enterprise model: Perfect for large organizations that have the capacity to support the TREAT infrastructure within their own network. The enterprise model is designed to run within the organization’s private network allowing TREAT to be accessed by all members granted access to the network and to TREAT.

Benefits of TREAT

Replacing paper-based tools with electronic tools is not a new idea but TREAT goes far beyond this simple concept. TREAT provides clinical practices with a single platform for the electronic implementation of ALL assessment tools allowing each to take advantage of the extra features in TREAT. With features focused on delivering clinical outcomes to users and patients, TREAT is an application that may be securely accessed from any browser-based workstation offering utility far beyond paper-based practice.

Easy to use
- TREAT was designed by clinicians for clinicians to be a friendly and easy to learn application.
- Every step of the way, TREAT facilitates easy data entry including the ability to carry forward data from previous assessments, easy to read and navigate forms, spell-checking, and edit checks.

Privacy and security
- Predefined and customizable roles with granular, configurable privileges to meet the needs of clinical workflow.
- All user activity is audited with user ID & timestamp: logons, logoffs, updates, insertions, deletions, views, and searches.
- All data interfaced to TREAT is secured before transmission.

Flexible implementation options
- ASP model: A secure version of TREAT that is accessible via the Internet and is ideal for small organizations or individual clinicians. The hardware and software resources, network security, data security and integrity, and system maintenance are all managed by HInext.
- Enterprise model: Perfect for large organizations that have the capacity to support the TREAT infrastructure within their own network. The enterprise model is designed to run within the organization’s private network allowing TREAT to be accessed by all members granted access to the network and to TREAT.

TREAT Highlights

Progress Notes
- This module incorporates all of TREAT’s benefits such as audit trails, detailed progress note history, advanced filtering and searching, integration with other tools and TREAT’s easy to use interface.
- Organizations can design customized note templates that meet their needs, incorporate collaborators and co-signers for notes, integrate seamlessly with the electronic care plan module and control access to printing, editing and deleting notes.

NRS
- TREAT’s NRS module includes extensive edit checks, easy to use and robust NRS Administrator features and functions for CIHI reporting and easy to complete forms.
- Proven submission management features means less time spent on data management and more on patient care.

OMHRS & RAI-MH
- TREAT’s implementation of the RAI-MH is robust, simple-to-use and powerful.
- TREAT ensures required input of data for a successful submission to CIHI through an exhaustive check process.
- TREAT performs all scoring necessary and provides immediate feedback regarding the MHAPs, Scales and SCIIP groups to give meaningful data at the time of assessment.

Assessment Sharing
- Organizations can set up consent-based sharing between themselves and other health care providers within their own circle of care.
- Ensures true integration along the continuum of care in a regional model of health care delivery.

Finally, an easy-to-use, real-time clinician assessment application

Designed to systematically capture the specialized data gathered during the assessment of patients. TREAT enables healthcare practitioners to use accurate and meaningful severity and change data to make better overall treatment decisions.
Immediate access to current and past assessments eliminates redundancy and improves quality of care.

Automated notifications (optionally via email) increase compliance and timeliness of assessments.

Consent-based sharing of assessments to other providers enhances continuity of care.

Immediate access to dynamic longitudinal graphs with visual comparisons to support and challenge outcomes-based thinking.

Custom and standard reports (available in HTML, PDF, Excel or CSV) inform clinical practice and facilitate benchmarking.

Data exports may be triggered at any time based on user-defined criteria to support in-depth statistical analysis.

Dynamic care plan module integrated with assessment scores.

Creates a base plan for interdisciplinary teams to focus on problem areas.

Patient-focused care plan module with fully integrated Best Practice Guidelines providing knowledge to front-line caregivers.

The HInext team has been an essential part of the successful implementation of HOBIC. They have listened to us and the organizations who are integrating HOBIC, brought unique and creative solutions and were ALWAYS available when we needed them. They get it.

The TREAT interface solution adheres to industry-accepted standards such as HL7, FTP and HTTPS.

The TREAT interface solution adheres to industry-accepted standards such as HL7, FTP and HTTPS.

TREAT was developed in partnership with the Centre for Addiction and Mental Health (CAMH) and supported by The Change Foundation (founded by the Ontario Hospital Association).

The TREAT interface solution adheres to industry-accepted standards such as HL7, FTP and HTTPS.

TREAT seamlessly integrates with an organization’s ADT and clinical systems to render patient and clinical data in TREAT forms, reports and workflow.

This sharing of information reduces duplicate data entry which decreases potential data errors and time spent away from the patient.

The TREAT interface solution adheres to industry-accepted standards such as HL7, FTP and HTTPS.

Secure login and password entry to TREAT ensures data protection.

Organizations subscribe to chosen forms from an extensive assessment tool catalog.

Intuitive electronic form improves accuracy with feedback to clinicians via edit checks, status screens and access to tool-specific help files.

TREAT was developed in partnership with the Centre for Addiction and Mental Health (CAMH) and supported by The Change Foundation (founded by the Ontario Hospital Association).
Immediate access to current and past assessments eliminates redundancy and improves quality of care.

Automated and immediate assessment scoring eliminates calculation errors.

Intuitive and effective information layout.

Facilitate problem analysis with the ability to focus on the individual questions within the scales and scores.

Immediate access to dynamic longitudinal graphs with visual comparisons to support and challenge outcomes-based thinking.

Custom and standard reports (available in HTML, PDF, Excel or CSV) inform clinical practice and facilitate benchmarking.

Data exports may be triggered at any time based on user-defined criteria to support in-depth statistical analysis.

Quick Tour

1. TREAT Integration

- TREAT seamlessly integrates with an organization’s ADT and clinical systems to render patient and clinical data in TREAT forms, reports, and workflow.
- This sharing of information reduces duplicate data entry which decreases potential data errors and time spent away from the patient.
- The TREAT interface solution adheres to industry-accepted standards such as HL7, FTP, and HTTPS.

2. Conducting Assessments

- Secure login and password entry to TREAT ensures data protection.
- Organizations subscribe to chosen forms from an extensive assessment tool catalog.
- Intuitive electronic form improves accuracy with feedback to clinicians via edit checks, status screens, and access to tool-specific help files.

3. Automatic Scoring of Assessment Results

- Automatic and immediate assessment scoring eliminates calculation errors.
- Intuitive and effective information layout.
- Facilitate problem analysis with the ability to focus on the individual questions within the scales and scores.

4. Results Management

- Immediate access to current and past assessments eliminates redundancy and improves quality of care.
- Automated notifications (optionally via email) increase compliance and timeliness of assessments.
- Consent-based sharing of assessments to other providers enhances continuity of care.

5. Outcomes Management

- Immediate access to dynamic longitudinal graphs with visual comparisons to support and challenge outcomes-based thinking.
- Custom and standard reports (available in HTML, PDF, Excel or CSV) inform clinical practice and facilitate benchmarking.
- Data exports may be triggered at any time based on user-defined criteria to support in-depth statistical analysis.

6. Electronic Plan of Client Care

- Dynamic care plan module integrated with assessment scores.
- Creates a base plan for interdisciplinary teams to focus on problem areas.
- Patient-focused care plan module with fully integrated Best Practice Guidelines providing knowledge to front-line caregivers.

TREAT was developed in partnership with the Centre for Addiction and Mental Health (CAMH) and supported by The Change Foundation (founded by the Ontario Hospital Association).

The HInext team has been an essential part of the successful implementation of HOBIC. They have listened to us and the organizations who are integrating HOBIC, brought unique and creative solutions and were ALWAYS available when we needed them. They get it.
